Fork Mounted Drum Rotator (DTR 1 & 2 Series)

Fork Mounted Drum Rotators are designed for manual rotation of 210 litre drums. The attachment simply slides onto the truck forks, thus allowing 360 degree controlled pouring/rotation via the gearbox. Variations of models allows for either crank handle rotation or loop chain rotation

Fork Mounted Drum Rotators offer controlled, safe pouring of 210litre steel/plastic drums. In order to pick up a drum; set the girdle to its horizontal position by using the handle/chain loop fitted to the gearbox. The truck forks must then be positioned at a height such that the girdle fits around the centre of the drum, between its rolling hoops. Ensure that the drum is held securely before lifting. Once lifted the drum can be rotated to begin pouring, the gearbox design ensures the drum can be locked at any desired angle.

Model Ref	Capacity	Drum Type	Method of Rotation	A Load Centre	B Fork Spread	C Fork Width	D Fork Thickness
DTR-1-DS	360kgs	1 & 2	Crank Handle	750mm	942mm	140mm	50mm
DTR-2-DS	360kgs	1 & 2	Loop Chain	750mm	942mm	140mm	50mm
